# ENHANCED FILE TRANSFER™ SMB (EFT™) SMB MODULES

## KEY RESULTS

**Security** - Keep data out of the DMZ, meet or exceed compliance standards, secure data in transit and at rest

**Automation** - Automate routine, recurring transfers based on file upload, monitored folder changes, or on a schedule.

**Standard protocols** - Exchange files with partners/customers using industry-standard protocols, FTP/S, HTTP/S, SFTP/SSH

**Ad hoc transfers** - Provide employees and partners secure, easy ways to exchange files over mobile devices, on the web, or with a client like CuteFTP®.

**Visibility** - Know what employees and partners are transferring and keep an eye on your network with auditing and reporting tools.

Globalscape® Enhanced File Transfer™ (EFT™) for small-to-medium businesses (SMB) is perfect for businesses that need to securely manage data exchanges among offices, clients, and partners. EFT SMB is modularly built so that you can add features to address specific requirements, including superior security, automated data processes, enhanced visibility, and file sharing.

## LICENSING

The flexible, modular approach to the licensing is accompanied by a per server-instance license. There are no limitations on the amount of connections, users, bandwidth, or CPU utilization for the product. Except in the case of the file sharing modules which are licensed per user. All module features are available during the 30-day trial.

## SECURITY

**DMZ Gateway®** - Our multi-platform, multi-layered security solution does not store or process data. It's simply a liaison through the "Demilitarized Zone" to your internal network. Your proprietary data always remains safe behind the firewall for EFT to store and process.

**High Security module** - The High Security Module (HSM) achieves or exceeds security practices mandated by the most rigorous standards, such as PCI DSS, FIPS 140-2 Validation, HIPAA, and Sarbanes-Oxley (SOX).

**OpenPGP module** - Secure your "data at rest" on a server using OpenPGP data encryption technology.

## WORKFLOW AUTOMATION

**File Transfer Client module** - The File Transfer Client module enables EFT SMB admins to define copy, move, and download actions in Event Rules. For example, you could define a rule to trigger when a file is uploaded, so that EFT SMB moves it to another folder.

**Folder Monitor module** - The Folder Monitor module creates an Event Rule trigger used to detect the creation, deletion, and renaming of files in a monitored folder, and to perform Actions based on these triggers. For example, perhaps a weekly report is uploaded to a specific folder. You can define an Event Rule so that when EFT SMB detects that a file has been added to the folder, an email is sent to notify one or more users that the report is available for download.

**Timer module** - The Timer module allows you to execute a specified Action (e.g., generate and send a report) only one time or to repeat at specified intervals. For example, you could schedule an Action to occur on July 8 at midnight, or every Monday morning, or on the last Friday of every month at 2 a.m.

**GLOBALSCAPE**

## ABOUT GLOBALSCAPE

Globalscape is a pioneer in securing and automating the movement and integration of data seamlessly in, around and outside your business, between applications, people and places, in and out of the cloud.  Founded in 1996, Globalscape's data exchange and integration software and services are trusted by over 13,000 customers in over 150 countries worldwide, including global enterprises, governments, and small and medium enterprises. Headquartered in San Antonio, TX, Globalscape enables companies to increase business agility by unleashing the power of data.  Whether you are a line-of-business stakeholder struggling to connect multiple cloud applications or an IT professional tasked with integrating partner data into homegrown or legacy systems, Globalscape provides cloud services that automate your work, secure your data and integrate your applications – while giving visibility to those who need it. Globalscape makes business flow brilliantly. Globalscape has consistently been named a top workplace by Computerworld, the San Antonio Business Journal, Texas Monthly, and the San Antonio Express-News, among others.

## PROTOCOL MODULES

**HTTP/S module** - HTTPS allows you to set up a secure connection for anyone in minutes—all they need is a web browser. The HTTPS module adds the HTTPS protocol to EFT SMB, enabling you to support browser-based transfers without having to install a web server (includes Web Transfer Client, below).

**SFTP/SSH module** - Authenticate and transfer data with SFTP-ready FTP clients, such as CuteFTP®.

## AD HOC FILE TRANSFER

**Mobile Transfer Client** - Secure anytime, anywhere access to information on EFT.

**Web Transfer Client** - Provide your business partners with access to EFT with our thin web client that can be used on any modern browser, leaving a small footprint that's easy on your resources.

**Workspaces module** - Workspaces is an enterprise secure file sharing solution that allows employees to easily and securely exchange folders and their files with internal and external users, without sacrificing the highest levels of control, visibility, and governance. The Workspaces module for EFT is the only file, sync, and share solution that supports customizable workflow automation.

## VISIBILITY

**Auditing and Reporting module** - Save time by running dozens of reports in seconds with our advanced auditing and reporting module. Spend your time productively rather than spending hours combing through enormous piles of data.
